## PROJECTS

### Neural Net GUI

Fall 2017

I made a website for demonstrating simple neural networks using HTML, CSS, JavaScript, jQuery, Three.js, and WebGL. Users can completely configure the network, including how many layers there are and the neuron count in each layer.

### iRobotics Competition Robot

2015 - 2017

Along with two other people, I developed the software for the MRDC competition robot. This included an Arduino C program, a C# program using .NET with a Windows Forms GUI, and a communication protocol for Xbee radio modules.

### Autonomous Robot

Fall 2016

With two other students, I developed a multi-threaded C++ program running on a Raspberry Pi to control an iRobot Create® 2 Robot to autonomously follow along a wall using sensors and scan the environment for specific images, using OpenCV.
